

FOR IMMEDIATE RELEASE

Heumann Environmental appoints manufacturer reps for Virginia and the Carolinas

LOUISVILLE, Ky. (October 1, 2012) – Heumann Environmental Company, which custom designs and manufactures specialized separation equipment for industrial processing and air pollution applications, has hired technical sales agents to represent the company in North Carolina, South Carolina and Virginia.

The two companies are Jackson-Hale Environmental Technologies, Inc., headquartered in greater Winston-Salem, N.C., and Process & Utility Corp., located near Richmond, Va.

“These companies have earned stellar reputations for serving the needs of their industrial customers,” said Bill Heumann, CEO of Heumann Environmental Company, or HEC. “We are excited to work with them to offer pollution control, dust collection and other industrial processing solutions.”

Process & Utility Corp. represents Heumann Environmental to a wide variety of manufacturers and industrial customers located within the Commonwealth of Virginia. Process and Utility Corp. was founded in 1978 to serve industrial and power customers.

“Any time we have worked with Bill and his associates, they have always done a really good job following through, selecting the right equipment and employing their expertise to do what is required,” said Bob Temple, Owner and President of Process & Utility Corp. “They consider all of the variables before recommending the right equipment, and that makes customers happy in the long run.”

Jackson-Hale Environmental Technologies (JHET) will represent HEC in North and South Carolina.

“We represent some of the most innovative technologies in the industrial pollution-control community, and have the experience and expertise to give customers the most reliable recommendations for their systems and component equipment. Additionally, our solutions are guided by our extensive experience with the EPA and OSHA regulatory framework,” said JHET Owner Craig Jackson.

“Heumann Environmental offers customers the benefit of decades of technical leadership in solving industrial challenges involving pollution control, dust collection and stream processing,” Jackson said.

Based in Louisville, HEC provides engineering consulting services as well as the design and

manufacture of industrial particulate separation equipment known as high-efficiency cyclones. Cyclones separate microscopic particles from gas streams and are used to improve the performance of dust collection, pollution control, ventilation, and product recovery systems. The equipment is integral to a variety of sectors, including the petrochemical, pharmaceutical, ethanol, petroleum, forest products, and utility industries.

Heumann, an industry expert and patent holder, formed HEC in 2011 to be a valued technical partner and resource to solve the most vexing and complex issues involving industrial processes. He has provided interactive lectures on cyclone technology to American Society of Mechanical Engineers (ASME) chapters, and is slated to appear at San Francisco, Seattle and New York ASME chapters in November.

About Heumann Environmental

HEC specializes in high efficiency cyclones, and complements the use of cyclones with an array of scrubber and filter technology. The company is a division of Andrew Elliot Group, a private equity holding company. For more information about HEC, visit www.heumannenviro.com or call 502.742.9677.

About the manufacturer representatives

Jackson-Hale Environmental Technologies, Inc., is a manufacturer representative firm based in Clemmons, N.C. For more information, visit www.jhet.com. Process & Utility Corp., of Mankin Sabot, Va., represents a variety of manufacturers that provide pollution-control and processing equipment. Call the company at the number below for more information.
