Heumann Environmental appoints Dennis Roederer as senior sales manager

LOUISVILLE, Ky. (October 15, 2012) – Heumann Environmental, a company that solves pollution control and industrial processing needs, has hired Dennis Roederer as senior sales manager.

Heumann Environmental provides engineering consulting services as well as the design and manufacture of industrial particulate separation equipment known as high-efficiency cyclones. The equipment is integral to industrial and air pollution applications throughout a variety of sectors, including the petrochemical, pharmaceutical, ethanol, petroleum, forest products and utility industries.

“Dennis brings a broad array of experience to HEC, having worked in this industry for decades,” said Chief Executive Officer Bill Heumann. “His addition to our team strengthens our knowledge base and helps HEC continue its growth by solving customer needs.”

Through his four-decade career in the dust collection industry, Roederer has managed a variety of projects in the U.S., Canada, Mexico, and Central and South America. Before joining Heumann Environmental, Roederer was regional sales manager for Fisher-Klosterman Inc. of Louisville, where he had full responsibility for sales and project management in the Southwest U.S. and for other accounts. He joined F-K in 1997 as a senior project engineer, developing customer proposals involving cyclones, scrubber and bag house applications.

He previously worked with Proceadair Industries Corp., directing the installation of dry scrubbing and other pollution control systems at steel mills and cement, brick and aluminum plants inside and outside the U.S. He was a principal at Dustex Corporation in Charlotte, a company that served the wood products, rock and asphalt industries with pollution control equipment. His career began at American Air Filter in Louisville.

Roederer studied industrial technology at Eastern Kentucky University, and is credited with developing a high-temperature mobile fabric filter used in soil remediation applications.

About Heumann Environmental

Based in Louisville, HEC specializes in high efficiency cyclones, and complements the use of cyclones with an array of scrubber and filter technology. The company is a division of Andrew Elliot Group, a private equity holding company. For more information about HEC, visit www.heumannenviro.com or call 502.742.9677.
