HEC consolidates operations into Jeffersonville facility

JEFFERSONVILLE, Ind. (October 7, 2013) – Heumann Environmental Company has brought together its sales, engineering, production and corporate functions into one location.

By moving engineering and corporate functions into its existing Jeffersonville, Ind. facility, HEC brings together experienced sales and engineering teams for HEC and its BaDD Wastewater Division in the same location as its ASME Code-certified metal fabrication shop.

Prior to the move, HEC and BADD were merged into a single company, Heumann Environmental Company.

“This change will ensure that the quality of the company’s equipment design and fabrication is maximized, so we may continue to meet our customers’ stringent quality and performance requirements,” said CEO Bill Heumann.

HEC designs and builds custom-engineered, high-efficiency cyclones, in the most appropriate configurations, and offers an array of scrubber, and filter technology equipment solutions. In addition to equipment solutions, HEC provides key services to improve performance. Heumann Environmental’s website is www.heumannenviro.com.
